

G95 INVERTER

The G95 is a simple floor-level loaded system of pallet exchange best suited to block stacked loads such as frozen food.

It works best with pallets up to 1200mm in either direction and with loads which are free of voids and stacked to the perimeter on at least one side.

Ideal for frozen meat, fish, vegetables or any boxed product which is reasonably stable when resting on its side.

USES INCLUDE

- Recovery of broken or non-standard pallets
- Removal of freezer separators from blast-frozen goods
- Transfer to and from in-house or rental pool pallets

KEY FEATURES

- Single moving top clamp
- Jaw openings can be customized to suit your load heights
- 95° tipping angle and sliding skate to free the pallet for exchange
- 1500 kgs loading capacity
- Various guarding options
- Available with lever or individual push button controls
- Flush-to-floor loading by pallet truck with no ramp
- Floor fixture essential
